What the heck is *ham* doing on my blog? I'm a vegetarian.

Spam most people know as the unwanted commercial comments on their blog, its counterpart we call **ham** to indicate legitimate comments. On the Akismet mistakes side, **missed spam** is pretty self-explanatory, but a **false positive** is what it's called when we incorrectly identify a legitimate comment as spam. (Which hopefully happens exceedingly rarely.) Also, we're sorry about the vegetarian thing.
